

KLCC PARK

A park for the people

Client KLCC Holdings Berhad
Location Kuala Lumpur City Centre Malaysia,

Surrounded by the Kuala Lumpur City Centre commercial development, the park at KLCC is conceived as a huge tropical garden integrally linked to the surrounding buildings with their private gardens. It is a place for recreation and relaxation, where city folks can seek respite amidst landscaped gardens, fountains and water cascades and a playground for children. As a functional showpiece, it serves to integrate and harmonize with the office buildings, Suria KLCC, hotel and residential buildings. Architecturally unique and pleasing park buildings are an integral part of the KLCC park. The building includes restrooms, people mover stops, gazebos and pergolas.

Design Concept

The park is unique in its theme and concept. It will be an unnatural park, where each component will be an artistic creation rather than a work of nature. The order imposed by the landscape artist transforms the natural topography into an art form. Highlights of the park include a fountain pool, playground, wading pool, shelters and benches, patterned footpaths, sculptures and murals

Part of the park is a heaven for birds and other local fauna. Much research preceded the selection of indigenous tree species whose fruits attract local and migratory birds. Through such careful effort it is expected that the KLCC Park in the heart of Kuala Lumpur will become an important link in the bird corridors of the region.
